PROFESSIONAL SUMMARY

Computer Science Engineering student specializing in backend development, cloud computing, and DevOps automation, with hands-on experience designing development architectures, REST APIs, and containerized microservices. Skilled in building and maintaining CI/CD pipelines and development infrastructure using GitHub Actions and Docker, establishing code quality standards through automated testing and structured code reviews, and collaborating across engineering and product workstreams. Reduced deployment time by 98% and delivered five production-style, end-to-end systems spanning Java, Python, AWS, and Kubernetes. Seeking to bring engineering excellence, architectural rigor, and a continuous-learning mindset to the Associate Software Engineer role.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, SQL

Backend & Architecture: Spring Boot, Node.js, REST APIs, Microservices Architecture, Architectural Design Patterns, Scalable System Design

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, IAM, CloudWatch) — production monitoring & infrastructure

CI/CD & DevOps: GitHub Actions, CI/CD Pipeline Design, Docker, Kubernetes, Nginx, Development Infrastructure Automation

Code Quality & Best Practices: Code Reviews, AOP-based Validation & Logging, Swagger/API Documentation, Automated Testing & Linting

Databases: PostgreSQL, MySQL

Web Development: React.js, HTML, CSS, Axios

Tools: Git, Docker Hub, Postman, Linux

TECHNICAL PROJECTS

CloudVault — Distributed Cloud Storage Platform — *Go · Kubernetes · Redis · RabbitMQ · PostgreSQL · React.js*

- Set technical direction and architected a cloud-native, highly scalable storage platform using microservices architecture and established architectural patterns for concurrent file uploads across distributed nodes.
- Designed backend services in Go integrated with Redis caching and RabbitMQ async messaging, applying performance and reliability best practices to reduce p99 latency by ~40%.
- Owned end-to-end development on Kubernetes with auto-scaling policies and production monitoring practices, achieving 99.9% uptime in cluster testing, and built a responsive React.js front end with real-time upload progress and role-based access control.

Automated CI/CD Pipeline & Development Infrastructure — *Docker · GitHub Actions · PostgreSQL · Nginx*

- Designed and implemented an end-to-end CI/CD pipeline using GitHub Actions, Docker, and Nginx to enable rapid, reliable feature releases.
- Reduced manual deployment time by 98% (from ~50 minutes to under 60 seconds per release), directly improving development velocity.
- Configured multi-stage Docker builds and automated test execution, linting, and code quality checks on every pull request, cutting image size by 35% and integration bugs by ~60%.

Full-Stack E-Commerce Application — *Spring Boot · React.js · MySQL*

- Architected a full-stack platform with a Spring Boot REST API backend and React.js frontend, supporting 500+ product listings.
- Designed a normalized, indexed MySQL schema following scalable data-architecture best practices, cutting query response time by 30%, and implemented JWT-based authentication, cart management, and order-tracking features.

Inventory Management System — *Spring Boot · React.js · PostgreSQL*

- Developed a real-time inventory dashboard with analytics, CRUD operations, and a low-stock alert system, reducing simulated stockout incidents by an estimated 45%.

Toy Subscription Box REST API — *Spring Boot · AOP · Swagger*

- Implemented a fully documented CRUD REST API using Spring Boot and Swagger UI, applying AOP for centralized logging, validation, and exception handling — reducing boilerplate by ~25%.

ENGINEERING PRACTICES & COLLABORATION

- Conducts self- and peer-driven code reviews on personal projects to maintain coding standards and catch defects early, mirroring team code-review culture; documents architecture decisions and API contracts to support knowledge sharing.

ACHIEVEMENTS

- Reduced CI/CD deployment time by 98% via full pipeline automation with Docker and GitHub Actions; designed a Kubernetes storage system with multi-node orchestration and auto-scaling; delivered 5 end-to-end cloud/DevOps/backend projects within 2 years of starting college while maintaining a 7.55/10 CGPA.
